Professional Summary

Computer Science student at Transport and Telecommunication Institute (TSI) with hands-on experience in Linux, Docker, software development, automation, networking, and CI/CD. Design and maintain a four-node self-hosted infrastructure with 110+ Docker containers across application, infrastructure, networking, security, monitoring, and production workloads. Experienced with Python, C++, Bash, Docker Compose, Git, reverse proxying, TLS, DNS, authentication, and deployment automation. Seeking to develop professionally in DevOps and software engineering.

Technical Skills

Programming: Python, C++, Bash
DevOps & Systems: Docker, Docker Compose, Linux/Ubuntu, CI/CD, SSH, automated deployments
Networking & Security: DNS, routing, VPN, reverse proxying, TLS, authentication, CrowdSec
Version Control & CI: Git, GitHub, Gitea, GitHub Actions, Gitea Actions, Renovate
Operations: Automated testing, monitoring, health checks, database migrations, dependency management, troubleshooting

Projects

Self-Hosted Infrastructure — Home Lab

- Designed and maintain a four-node Linux homelab with 110+ Docker containers spanning application, infrastructure, networking, security, monitoring, and production workloads.
- Operate distributed infrastructure including Traefik, Authentik, Gitea/Gitea Actions, AdGuard Home, CrowdSec, Portainer.
- Deploy service stacks including a Matrix homeserver, Stalwart mail server, Nextcloud, Immich, LibreChat, Home Assistant, and Jellyfin.

- Configure reverse proxying, TLS certificates, DNS, VPN access, authentication, routing, and service networking across 1 local and 3 remote hosts.
- Implement CI/CD and deployment workflows using Gitea Actions, Docker BuildKit, Docker Compose, Portainer, and automated container updates.
- Monitor services with Uptime Kuma, Gatus, Beszel, and health checks; troubleshoot networking, authentication, storage, deployment, resource, and availability issues.

Recomte — Full-Stack Web Application

GitHub: github.com/darkzoul5/recomte

- Developed and maintain a full-stack Node.js/Fastify application for managing and listing caravans for sale on a Russian-language commercial website.
- Implemented REST APIs, server-side rendering with EJS, SQLite persistence, database migrations, authentication, and file/image management.
- Containerized the application with Docker Compose using separate production and test environments; deployed behind Traefik with HTTPS, security headers, persistent storage, and non-root containers.
- Built automated deployment workflows covering Git synchronization, Docker image publishing, remote deployment, locking, retries, and test database synchronization.
- Added automated testing, linting, dependency management, and database migration workflows using an AI-assisted development process with responsibility for requirements, implementation review, testing, debugging, integration, and deployment.

VPN Subscription Aggregation Tool — Independent Fork

GitHub: github.com/darkzoul5/3x-ui_sub_aggregator

- Independently continued development of an existing Python subscription aggregation project after the upstream project became inactive.
- Added support for VLESS/base64 subscriptions, VLESS-to-Clash/Mihomo conversion, native Clash/Mihomo formats, and parallel retrieval from multiple 3x-ui servers.
- Implemented proxy deduplication, grouping and routing rules, configurable HTTP endpoints and health checks, local/remote configuration, Docker/Compose deployment, and automated testing.

YouTube Playlist Downloader

GitHub: github.com/darkzoul5/YoutubePlaylistSync

- Developed a Python application to synchronize and organize YouTube playlist content locally, including batch processing, file management, and automated updates.
- Integrated external tools and APIs for media retrieval and processing; managed development and version control with Git and GitHub.

Education

Transport and Telecommunication Institute (TSI), Riga
Bachelor of Computer Science — Expected 2028
Relevant coursework: Data Structures, Operating Systems, Programming Fundamentals, Object-Oriented Programming

Certifications

- Red Hat — System Administration I, 2026
- Red Hat — OpenShift Development I: Introduction to Containers with Podman, 2026
- Cisco Networking Academy — Introduction to Cybersecurity, 2024
- Cisco Networking Academy — Learn-A-Thon 2024

Work Experience

General Laborer — Airport Equipment Manufacturer, Riga
Summer 2022

- Supported manufacturing of airport infrastructure equipment, including cutting, drilling, grinding, and assembly.
- Worked in a fast-paced team environment requiring precision, reliability, and adherence to procedures.
